

Aviation Has Been My Life	iii
Why Did I Write This Book?	iii
Why Two Volumes	iii
Standard Disclaimers	iii
Political Correctness	v
Dedication	v
It's Been a Grand Flight so Far	v

CHAPTER 1 *Operational Requirements vs Technological Capabilities*

Introduction	1
History	1
The Lessons of War	1
Rules, Limitations and Physical Laws	2
<i>Rules and Regulations</i>	2
<i>Aircraft Limitations</i>	2
<i>Physical Laws</i>	2
The Other Lessons	4
Murphy's Law	4
A Review of the Characteristics of Helicopter Predations	5
<i>Operations From Remote, Austere Locations</i>	5
<i>Continuous Performance Monitoring</i>	5
<i>Performance Monitoring and Handling Qualities</i>	6
Integrating The Talk Show	7
Updating the Mature Helicopter	10
Summary	11

CHAPTER 1 *Civil Certification Part I*

Understanding Airworthiness	13
An Imperfect World	13
Differences and the Dividing Line	14
TSO'd Equipment	14

CHAPTER 2 *Civil Certification Part II*

Originally Titled We're Not Worthy Part II	17
The Legal Basis	17
Performance vs. Limitations	18
Flight Manual Supplements	18

CHAPTER 3 *Civil Certification Party III*

The Performance Charts	21
The Problems with Civil Performance Charts	22

CHAPTER 4 *Civil Certification Part IV*

Scratching The Surface	23
ICAO- A United Nations Success Story	23

27 or 29- What's The Difference?	24
Same Paragraph Number - Different Rule	24
Part of safety net	25
What if the Requirements Have Changed?	25
TSO'd Equipment	25

CHAPTER 5 *Civil Helicopter Performance Charts*

Power Available Charts / Topping Power	27
Piston Engine Power Available Chart - through the back door	27
Turbine Engine Charts	28
How to Invalidate the Certificate of Airworthiness	28

CHAPTER 6 *Only One Height IGE Performance*

CHAPTER 7 *Maximum Performance Takeoff Myth*

Origin Of the Problem	35
Questions Without Answers	35
What It All Means	36

CHAPTER 8 *Real Maximum Performance Takeoff*

Eureka!	39
Two Methods Tested	39
Disclaimer About HV Curve	39
How to Squeeze the Most Out of Your Helicopter	40
Trying It Out - It Worked!	40

CHAPTER 9 *Range and Endurance*

Rate of Climb	43
IFR Climb Gradient	43
Angle vs. Rate of Climb	44
Range and Endurance Airspeed	44

CHAPTER 10 *Even More Range and Endurance*

Points of Clarity	47
Getting What's Needed	47
Getting Your Auto On	48

CHAPTER 11 *Transient Limitations*

Getting the Answers	51
Exceeded or Not Exceeded?	51
Measuring the Overage	52

CHAPTER 12

Know Your Limitations

CHAPTER 13

Testing for Certification Part 1

- Test Pilot Defined 57
- A Very Short First Flight 57
- Another Flight of Fancy 57
- Finding a Test Pilot 57
- Before You Cut Metal 58

CHAPTER 14

Testing for Certification Part 2

- Getting a New Type Into the Air 59
- Some Rules of Flight Testing 59
- More Tests 60

CHAPTER 15

Testing for Certification Part 3

- Different Azimuths of Wind 62
- Measure with a Micrometer, Mark with a Chalk Line, Cut with an Axe 62
- High Risk Tests 62
- Height Velocity Curve 62
- Best Kept Secrets 63

CHAPTER 16

Getting to Know Autopilots Part I

- The Obvious Disclaimer 65
- Terms Used 65
- The First Thing is Stick Trim 65
- Next is the Force Trim 65
- Input types 66
- Off We Go! 66
- SAS Only Mode 66
- ATT (Attitude Hold) Mode 66

CHAPTER 17

Getting to Know Autopilots Part II

- One Main Difference from Hover 69
- ATT Mode 70

CHAPTER 18

Getting to Know Autopilots Part II

- One Main Difference from Hover 73
 - SAS-Only Mode* 73
- ATT Mode 74

CHAPTER 19*Getting to Know Autopilots Part 4*

- In the Low-Speed Area 77
- In Forward Flight 78
- Between Hover and Forward Flight 79

CHAPTER 20*More Training, not New Equipment*

- Equipment or Training? 81
- Inherent Concerns 81
- The Training Conundrum 82
- Single vs. Twin 82
- Knowing the Route 83

CHAPTER 21*Weight and Center of Gravity*

- Understanding the Issue of Weight 85
- Understanding the Issue of Balance 85
- Calculating Center of Gravity 86
- Longitudinal and Lateral CG 86
- Vertical CG 86

CHAPTER 22*Cargo Hooks and Load Cells*

- What has this got to do with helicopters? 89
- Understanding the Need 90
- The Real-World Issue 91

CHAPTER 23 $F = M \times A$

- Revisiting Lift and Drag 93
- Drag- Nothing is Free! 94
- The Effect in Real Life 95
- An Interesting Aside 95

CHAPTER 24*What are we training Helicopter Pilots to Do with Tail Rotor Failures?***CHAPTER 25***Helicopter Specific Ratings***CHAPTER 26***Low Cost Simulation*

- Crunching the Numbers 101
- On the Other Hand... 102

CHAPTER 27*Low Cost Simulation*

- EMERGENCY PROCEDURES 103
- WHAT ELSE CAN BE TAUGHT? 104

Inherent Complexities **105**
Development Differences **105**
Usage and Acceptance **106**

CHAPTER 28 *Too Many Clocks*

Comparing Takeoffs **109**
 Fixed Wing **109**
 Helicopter With The Same Turbine Engine **109**
A Different Approach **110**
Thinking Outside the Box **111**

CHAPTER 29 *Tyranny of Mechanical Displays*

CHAPTER 30 *Slip Balls Exposed*

The Source of the Confusion **115**
Redefining the Concept **116**
Answering the Question **116**

CHAPTER 31 *What's Wrong With This Picture?*

Uneven playing fields **120**
Performance charts **120**
Myths and oversights **120**
Direct comparison **121**
Alternatives **121**

CHAPTER 32 *Runways Vs. Helipad*

CHAPTER 33 *Escaping From Confined Areas*

Examining the Issue **125**
Methods to Potentially Avoid **125**
 The Obvious Method: **125**
 The Pendulum Method: **126**
Back it Up: The Well-Thought Out Method **126**
 Other Techniques **126**

CHAPTER 34 *Weather Just for Helicopter Pilots*

Why aren't helicopters as safe as airliners? **127**
Airliners vs. Helicopters **127**
Weather Reporting **128**
Predicting the Weather **128**

CHAPTER 35	<i>Night is Not VFR</i>
CHAPTER 36	<i>Night Light</i>
CHAPTER 37	<i>Firefly- Solving the Night Landing Problem</i>
	Typical Use for the Portable System 137
	Four Basic Angles for the Glide Slope 138
	Background to the reasons for Firefly 138
	Self-Contained 138
	Summary 139
CHAPTER 38	<i>\$2,000 per second!</i>
	Before you read any farther- 141
	Typical Hydro- Mechanical Engine Controls (or Governors) 141
	Consider the Inputs! 142
	Early electronic controls 142
	Recent changes. 142
	FADEC defined 142
	Logic and such 143
	<i>Overtorques - Begone! 143</i>
	The Inevitable Failure Question 144
	Practical Benefits for Pilots 144
	A Note of Caution 144
	<i>It won't be the Same Anymore 145</i>
	Price etc. 145
CHAPTER 39	<i>Winter Operations</i>
	The Simple Things 147
	Icing Considerations 148
	Landings and Takeoffs 148
	Pluses and Minuses 149
	Other Tidbits 149
CHAPTER 40	<i>Cold Hearted Liars</i>
	The Problem 151
	The Mechanics 151
	Beyond IFR 153
	Conclusion 153
CHAPTER 41	<i>Low Speed Disorientation</i>
CHAPTER 42	<i>Digital Fuel Controls</i>
	What's the import? 157

Hydromechanical controls 157
Advent of FADEC 158
Exceedances, begone! 159
Concern Remain 160

CHAPTER 43 *Digital Engine Control Failures*

The Origins of the Problem 163
The Problem Expands 163
The Heart of the Issue 164
Overcoming the Problem 164

CHAPTER 44 *Loss of Tail Rotor Effectiveness and the Engine Governor*

CHAPTER 45 *Fuel Nozzle Clogging*

CHAPTER 46 *Recuperation for Helicopter Engine*

Recuper what? 171

CHAPTER 47 *Can You Trust Your Navigation Data?*

In the Beginning 173
The Down Side 173
From the Beginning 174
A Scenario 174
Not a Perfect World 175
Solutions Emerge 175
TAWS, Too 176

CHAPTER 48 *Differential GPS Approach*

CHAPTER 49 *Dealing With Crowded Airspace*

At the Scene 179
Why Obvious Solutions Don't Work 179
What We Can Do 180

CHAPTER 50 *Fly Toward the Light*

Fundamental Re-Shaping Of the System 183
IFR Lite 183
The Technology 183
Route Planning 183
Separation From The Fixed Wing World 184
A Cornerstone of Safety 184
Proving the Concept 185

CHAPTER 51	<i>Flying IFR With a Slung Load and Without Nav aids</i>
CHAPTER 52	<i>Risk Assessment is Just Decision Making</i>
	So– what is a risk? 189
CHAPTER 53	<i>Learn From The Mistakes of Others</i>
	Headware Skills 191
	Reinforcing Bad Decisions 191
	Lessons From the Fixed-Wing Side 192
	A Lack of Real World Training 192
CHAPTER 54	<i>Helicopter to Fixed Wing Comparison -Simulators</i>
	Inherent Complexities 195
	Development Differences 196
	Usage and Acceptance 196
	3 Hours of Simulator Training... 197
CHAPTER 55	<i>Why aren't Helicopter Operations as Safe as Airlines?</i>
	Airliners vs. Helicopters 199
	Are you starting to get the picture? 200
	Weather 201
	Weather Reporting 201
	<i>Predicting the Weather</i> 202
	Navigation 202
	Instrument Flight 203
	<i>Aircraft IFR Capability</i> 203
	<i>Pilot IFR Capability</i> 203
	<i>IFR Infrastructure</i> 203
	<i>Runway and Landing Environment</i> 204
	<i>Maps and Charts</i> 204
	Scheduled Operation 205
	Support Personnel 205
	<i>Dispatchers</i> 205
	<i>Others</i> 205
	CFIT and other Safety Issues 205
	<i>Equipment</i> 205
	<i>Performance Data</i> 206
	<i>Performance Information</i> 206
	Crew 207
	<i>Number of Pilots</i> 207
	<i>Training / Ratings</i> 207
	Operations 207
	<i>Checklists and Standard Operating Procedures</i> 207
	Training 207
	<i>Simulators</i> 207
	How about the crew? 207
	Facilities 209

Landing Area Lighting 209
Emergency Crews 209
Obstacles Near Facility 209
Unions 209

A Recent Question 210

CHAPTER 56 *Fatigue in Helicopter Operations*

Helicopter Operations Are Different 211
Living Accommodation 212
Crew Duty Times 212
The Solution 212

CHAPTER 57 *Down-Wind Takeoff*

THE MECHANICS 215
SUMMARY 216

CHAPTER 58 *Why are Helicopters Difficult to Fly?*

Hovering a Helicopter – 217
So what? 217
Having explained how we fly, now it's time to look at why it's difficult. 218
Slow Response Explained 218
What to Look At 219

CHAPTER 59 *Coordination and Co-Operation*

Making it Work 221
Practice and Preparation 221
The Head Magnet Syndrome 222
Standardized Wording & Procedures 222
Use of Simulators 222

CHAPTER 60 *Cockpit Demonstrator Evaluates System Concepts*

CHAPTER 61 *Policemen or Pilots?*

Very Instructive Passenger Trip 229
Deciphering The Radios 230
Translating 'Police Sense' 230

CHAPTER 62 *Gaining an Edge*

An Idea With Legs 231
The Right Kind of Vortex 232

CHAPTER 63	<i>Urban Aerospace X-Hawk</i>
	Idea with Merit 235
	Changes over 50 Years 235
CHAPTER 64	<i>Need For Speed</i>
	Tilt Rotor 239
	Sikorsky X2 240
	Piasecki X-49A SpeedHawk 240
	Eurocopter X3 241
	Some Additional Points 241
	Redundancy of control: 241
	Overcoming drag 241
	The Benefits of High Speed 241
	Not for Everyone 242
	We Don't Handle Change Well 242
	Helicopters Aren't Going Away 242
CHAPTER 65	<i>Sikorsky's X-2</i>
	Single Engine machine 243
	More technical details 244
CHAPTER 66	<i>Eastern European Helicopters</i>
CHAPTER 67	<i>Hyperspectral Imaging</i>
	Hyperspectral – many spectrum 249
	What does all this mean to us in Aviation 249
	<i>Search and Rescue</i> – 250
	<i>Exploration</i> 250
	<i>Agriculture</i> 250
	Real Time Detection 250
	Summary 251
CHAPTER 68	<i>A Unique Navigation System</i>
	How does COPA/PLRS track aircraft position? 253
CHAPTER 69	<i>Early Moving Maps- Teldix KG-10</i>
	Additional Features 258
	Well, we got to fly but did not get to the pub 258
CHAPTER 70	<i>A Look at the Future of Rotary Wing Flight</i>
	Unlocking the Potential 261

Tilt Rotor 261
Compound Helicopters – 261
Tip-Driven Rotors (Rotordyne) 262
Carter Copter – 262
Pure compounding is well known – 262
Other Peripheral Technologies 262
What technology isn't being Exploited 262
Ducted Fans 262
Co-axial rotors - 262
Tilt Wing - 262
Ordinariness of helos 263

CHAPTER 71 *10 Commandments of Helicopter Flying*

CHAPTER 72 *Hymn of Flying Strain*

CHAPTER 73 *Aircraft Flown*
